

Foundation: 28-Day Learning Index

Use this page to navigate all 28 days of foundation notes. Each week ends with a revision day.

Week 1: Python Basics and Banking Operations

Day	Topic	Important headings
Day 1	Save Password	Variables, comments, indentation, <code>input()</code> , and output
Day 2	Validate Password	Strings, <code>==</code> , Boolean thinking, and <code>if-else</code>
Day 3	Change Password	Password comparison, conditions, nested decisions, and empty-input validation
Day 4	Open Bank Account	Strings, numbers, <code>input()</code> , type conversion, and functions
Day 5	Deposit Amount	Addition, <code>+=</code> , balance updates, functions, and input validation
Day 6	Withdraw Amount with a Limit	<code>if-elif-else</code> , comparisons, multiple conditions, and validation
Day 7	Weekly Revision: Days 1–6	Variables, input/output, type conversion, conditions, and operators

Week 2: Menus, Loops, Lists, and Functions

Day	Topic	Important headings
Day 8	Simple Menu Choice	Menus, <code>input()</code> , integer conversion, and <code>if-elif-else</code>
Day 9	Repeat a Menu Using a while Loop	<code>while</code> , <code>break</code> , loop conditions, and repeating menus
Day 10	Print Numbered Options Using <code>range()</code>	<code>for</code> , <code>range()</code> , lists, and indexing
Day 11	Store a Transaction in a List	Lists, <code>append()</code> , and string formatting
Day 12	Show Transactions Using a Loop	Lists, <code>for</code> , loop variables, empty-list checks, and functions
Day 13	Create a Deposit Function	<code>def</code> , parameters, <code>return</code> , and function calls
Day 14	Weekly Revision: Days 8–13	Menus, loops, <code>range()</code> , lists, functions, and <code>return</code>

Week 3: Strings and Data Collections

Day	Topic	Important headings
Day 15	Clean an Account Holder Name	<code>strip()</code> , <code>title()</code> , <code>lower()</code> , and <code>upper()</code>
Day 16	Mask an Account Number Using Slicing	Indexing, slicing, negative indexing, <code>len()</code> , and string repetition
Day 17	Clean a Phone Number	<code>replace()</code> , <code>strip()</code> , method chaining, and string validation
Day 18	Create and Update a Profile Dictionary	Key-value pairs, accessing values, updating values, and <code>.get()</code>
Day 19	Add a Payee Using a List of Dictionaries	Lists, dictionaries, <code>append()</code> , and records
Day 20	Store Unique Cities Using a Set	Sets, uniqueness, duplicate removal, <code>add()</code> , and set conversion
Day 21	Weekly Revision: Days 15–20	String methods, slicing, dictionaries, lists of dictionaries, and sets

Week 4: Searching, Aggregation, Records, and Error Handling

Day	Topic	Important headings
Day 22	Limited Login Attempts	<code>while</code> , counters, loop conditions, <code>break</code> , and comparisons
Day 23	Search for a Payee by Name	Loops, dictionary access, Boolean flags, and search patterns
Day 24	Calculate Total Deposits	Lists, <code>for</code> , accumulators, running totals, and <code>return</code>
Day 25	Create a Transaction Tuple Record	Tuples, indexing, and fixed data
Day 26	Print a Dictionary Using <code>items()</code>	<code>.items()</code> , keys, values, and <code>for</code> loops
Day 27	Handle Amount Input Safely	<code>try</code> , <code>except</code> , <code>float()</code> , <code>ValueError</code> , and friendly errors
Day 28	Weekly Revision: Days 22–27	Counters, searching, accumulators, tuples, <code>.items()</code> , and <code>try-except</code>

Learning Path at a Glance

1. Learn variables, input, output, conditions, and basic calculations.
2. Practice menus, loops, lists, and reusable functions.
3. Work with strings, dictionaries, nested collections, and sets.
4. Combine searching, aggregation, tuples, dictionary iteration, and error handling.
